Shenzhen Better Power Technology Co., Ltd

<https://www.ibaiter.com>

## Introduction

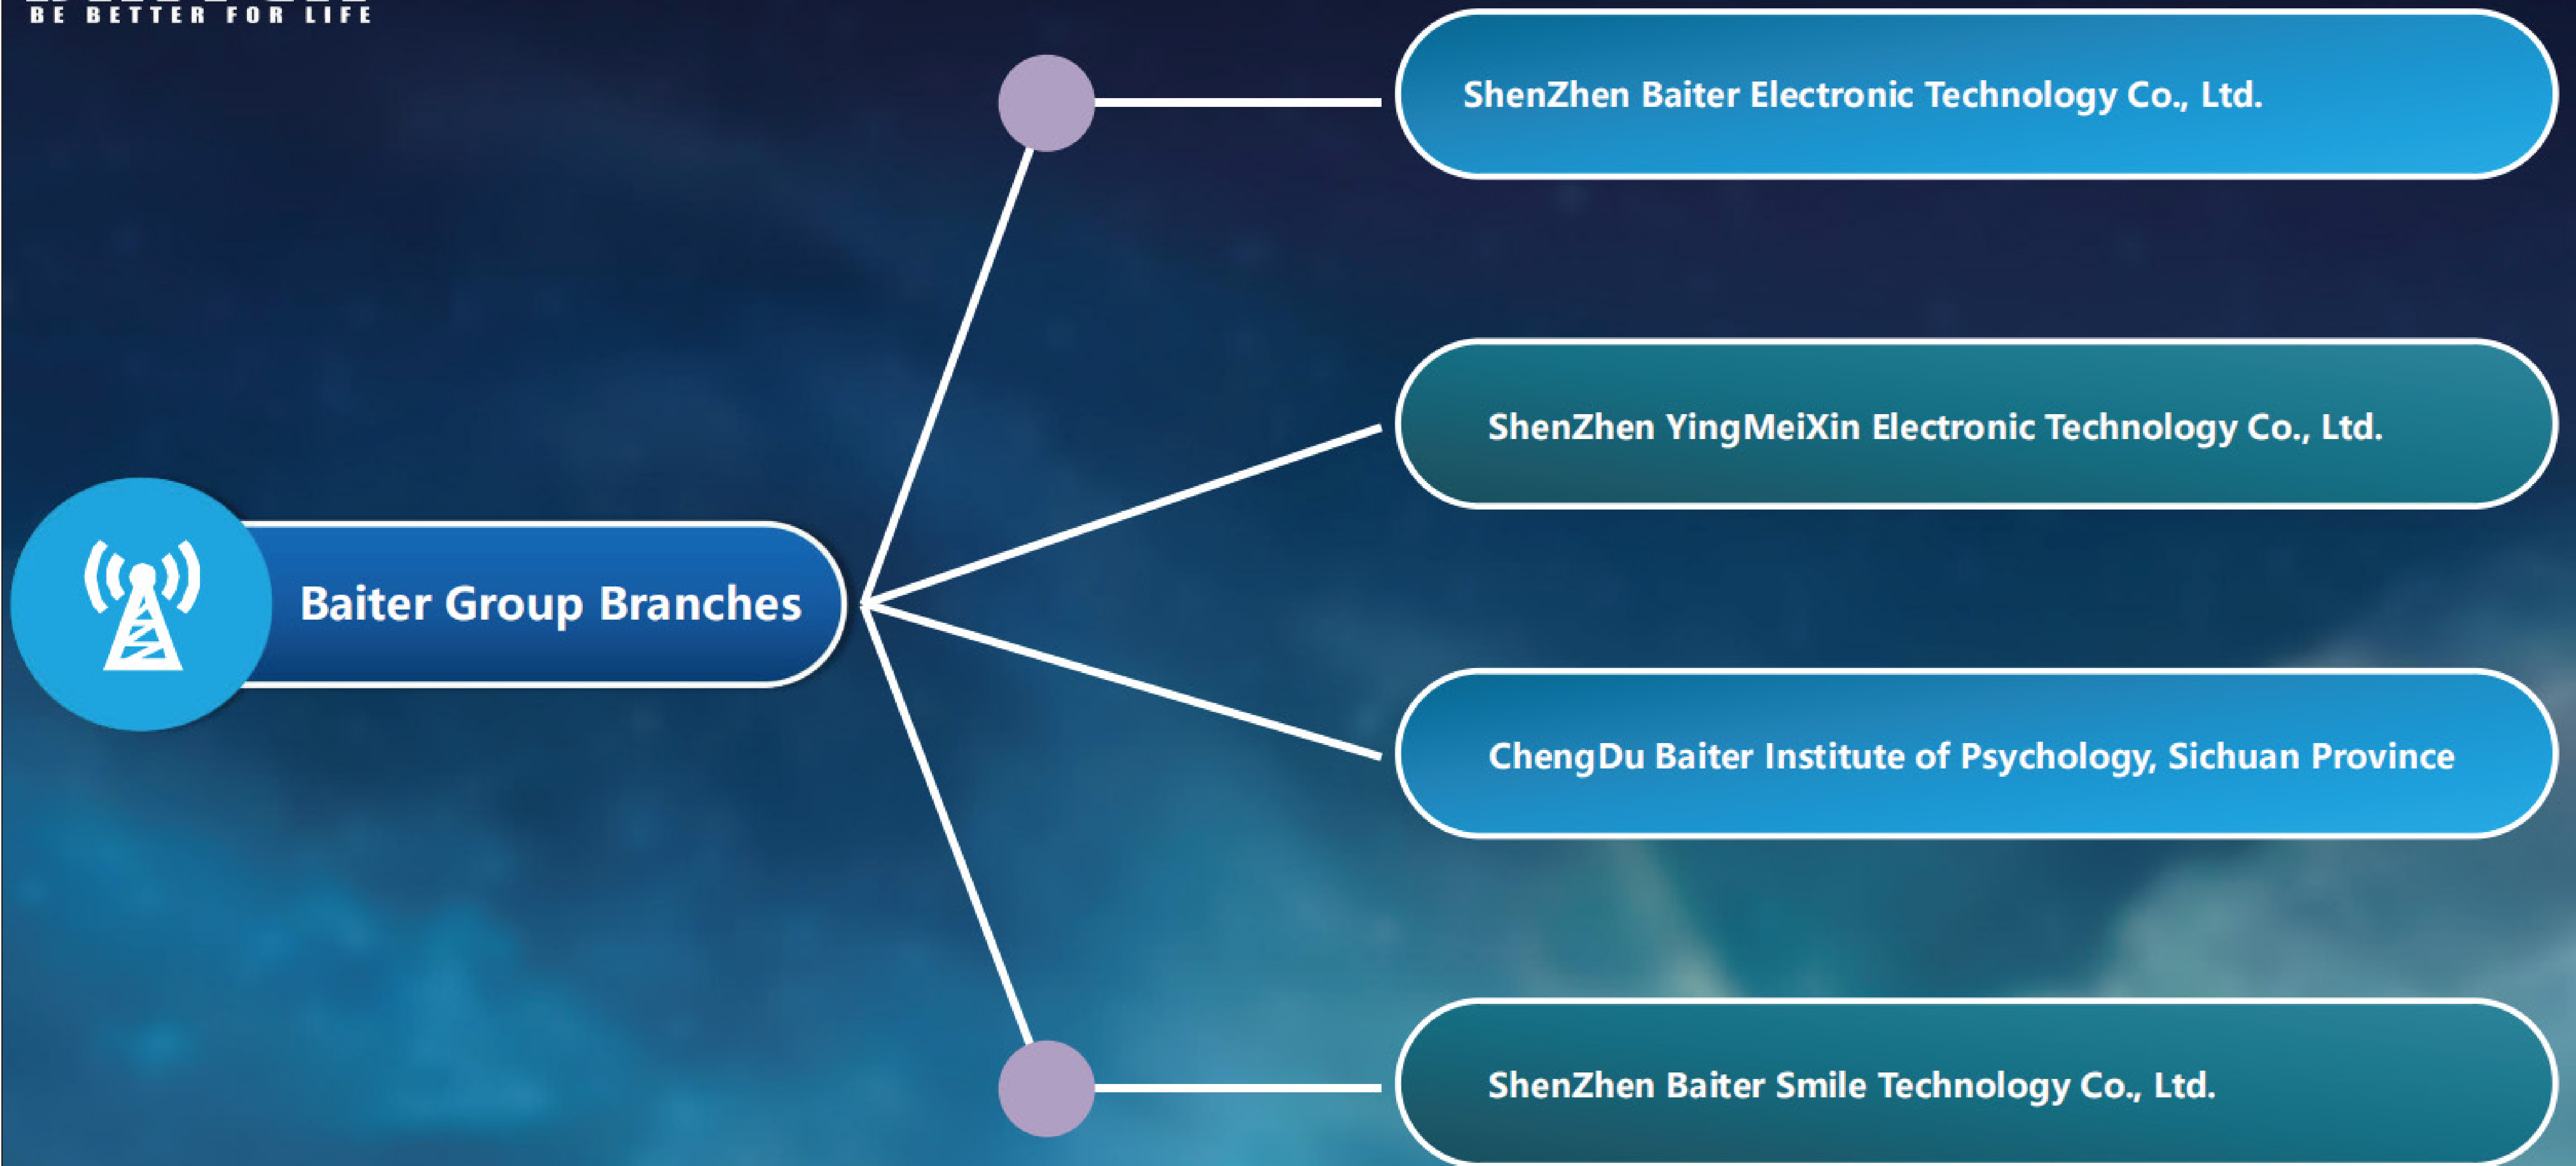

Established in 2005, Shenzhen Better Power Technology Co., Ltd, is a new high-tech enterprise. We specialize in researching, developing, producing and selling mobile phone battery packs, chargers, power bank. We have more than 15 years of experience in providing OEM/ODM services for mobile phone accessories and related electronic items. And The registered trademark is "Baiter®", "BAB®" and "POWERPOND®".

Our company has a production base of 10,000 square meters and more than 300 employees, including nearly 50 experienced and skilled professionals and management personnel. It has multiple production plants, 5 standard production lines, and independently owns patents. With many large-scale equipment such as injection molding, molds and oil-jet screen printing, the company will continue to improve its innovation capabilities and manufacturing capabilities to provide users with cost-effective and high-value-added products.

Absolute Baiter maintains a rapid growth trend and has developed and designed more than forty patented mobile power supplies, mainly for Asia, Europe, America, and dozens of countries and regions. The company has already cooperated with some of the world's major brands. Companies such as CHEERO of Japan, TOYOTA of Japan, HONDA of Japan, HITACHI of Japan, POWERSEED of Japan, LOOKEAST of Japan and PHILIPS of Italy have established long-term cooperative relations.

We implement and strictly follow the ISO9001:2008 quality control system. All production processes are finished within the factory, making us advantageous in price, quality, prompt delivery and reliable after-sales service.

## ORGANIZATION CHART

## Company History

2020

Cooperate with the British company RidgeMoney

2019

Cooperation with Japan Soft Bank

2018

Shenzhen Baiteer Power Technology became a subsidiary of DLG

2017

Integrate with Huazhi and process POS machines for it

2015

Cooperated with Medtronic, Inc. to become its medical equipment battery supplier

2012

Become a strategic cooperative supplier of CHEERO brand mobile power supply in Japan

2010

Cooperated with LOOKEAET, began to develop and produce UPS power supply, mobile power supply

2008

Established Shenzhen Baiteer Power Technology, set up a notebook battery production line, and cooperated with DLG battery cell factory in the same year.

2007

Established battery PACK production line, developed and produced various smart batteries.

2005

Established Baiter Power Technology Co., Ltd.

## Office & Meeting Room

More than 1000 square meters; Equipped with modern and comfortable supplies, 75 staffs working here;

Room Molding/Injection/SMT

Parts assembly line

Finished products test area

Parts free turnover area

The battery capacity analysis test workshop

The battery aging test workshop

Serialized battery test workshop

## 1. Customer Demand

The customer puts forward a rough demand, first determine whether it can be achieved.

## 2. Product Appearance Design

The product ID designer designs the product appearance according to the customer's requirements and communicates with the structural designer to ensure the feasibility of product production, repeat confirmation and modification to ensure customer satisfaction.

This project is expected to take 2 working days.

## 3. Actual customer confirmation and evaluation

The customer confirms (product appearance, product function, product certification, product packaging, bulk delivery, payment and delivery methods), etc., and the two parties formulate related guarantee contracts to carry out follow-up work.

## 4. Structural Design

Design the internal structure and mechanical structure of the product according to the 《Product Requirements Specification》. Responsible for the review of the design and manufacture of related molds, jigs and fixtures for plastics, hardware and other products, and start 3D proofing after customer confirmation.

The structural design is expected to take 6 working

## 5. Hardware/Software Scheme Design

Software and hardware engineers design corresponding modular functions according to customer needs.

## 6. 3D Proofing

After the design is completed, 3D proofing will be delivered to the customer for confirmation.

This project is expected to take 4 working days.

## 7. Product Mouldings Open

The product opens the mold.

This project is expected to take 30-45 days

## 8. Product performance test

All-round testing is required after the sample is produced, such as:, Protection performance test, Input voltage range test, Output voltage test, Load regulation test, Quiescent current test, Dynamic load test, Overcurrent test, Short circuit test, Capacitive load test, Charge and discharge efficiency test, Output ripple test, Charging turn light test, Discharge lamp test, Charging characteristics test, Discharge characteristic test, Switch button test, Discharge capacity conversion efficiency test, Charge and discharge time test

## 9. Comprehensive product evaluation

Improve product certification and evaluation EMC test (anti-radiation interference), EMI test (electromagnetic interference), etc.

## 10. Confirm the delivery date and arrange trial production

Initially confirm the delivery date and arrange trial production

## 11. After-sales follow-up and related services

After the completion of production and quality inspection, the delivery will be arranged and tracked according to the delivery method agreed with the customer in the previous period, and the customer will be provided with one-to-one after-sales service and guarantee after receiving the goods.

## 1. Customer Demand

According to customer needs, confirm the attributes of the developed products and formulate the 《Product Requirements Specification》 to design according to the requirements in the manual.

This project is expected to take 1 working day

## 2.Product Appearance Design

The product ID designer designs the product appearance according to the customer's requirements and communicates with the structural designer to ensure the feasibility of product production, repeat confirmation and modification to ensure customer satisfaction.

This project is expected to take 2 working days.

### 3. Actual customer confirmation and evaluation

The customer confirms (product appearance, product function, product certification, product packaging, bulk delivery, payment and delivery methods), etc., and the two parties formulate related guarantee contracts to carry out follow-up work.

#### 4. Structural Design

Design the internal structure and mechanical structure of the product according to the 《Product Requirements Specification》. Responsible for the review of the design and manufacture of related molds, jigs and fixtures for plastics, hardware and other products, and start 3D proofing after customer confirmation.

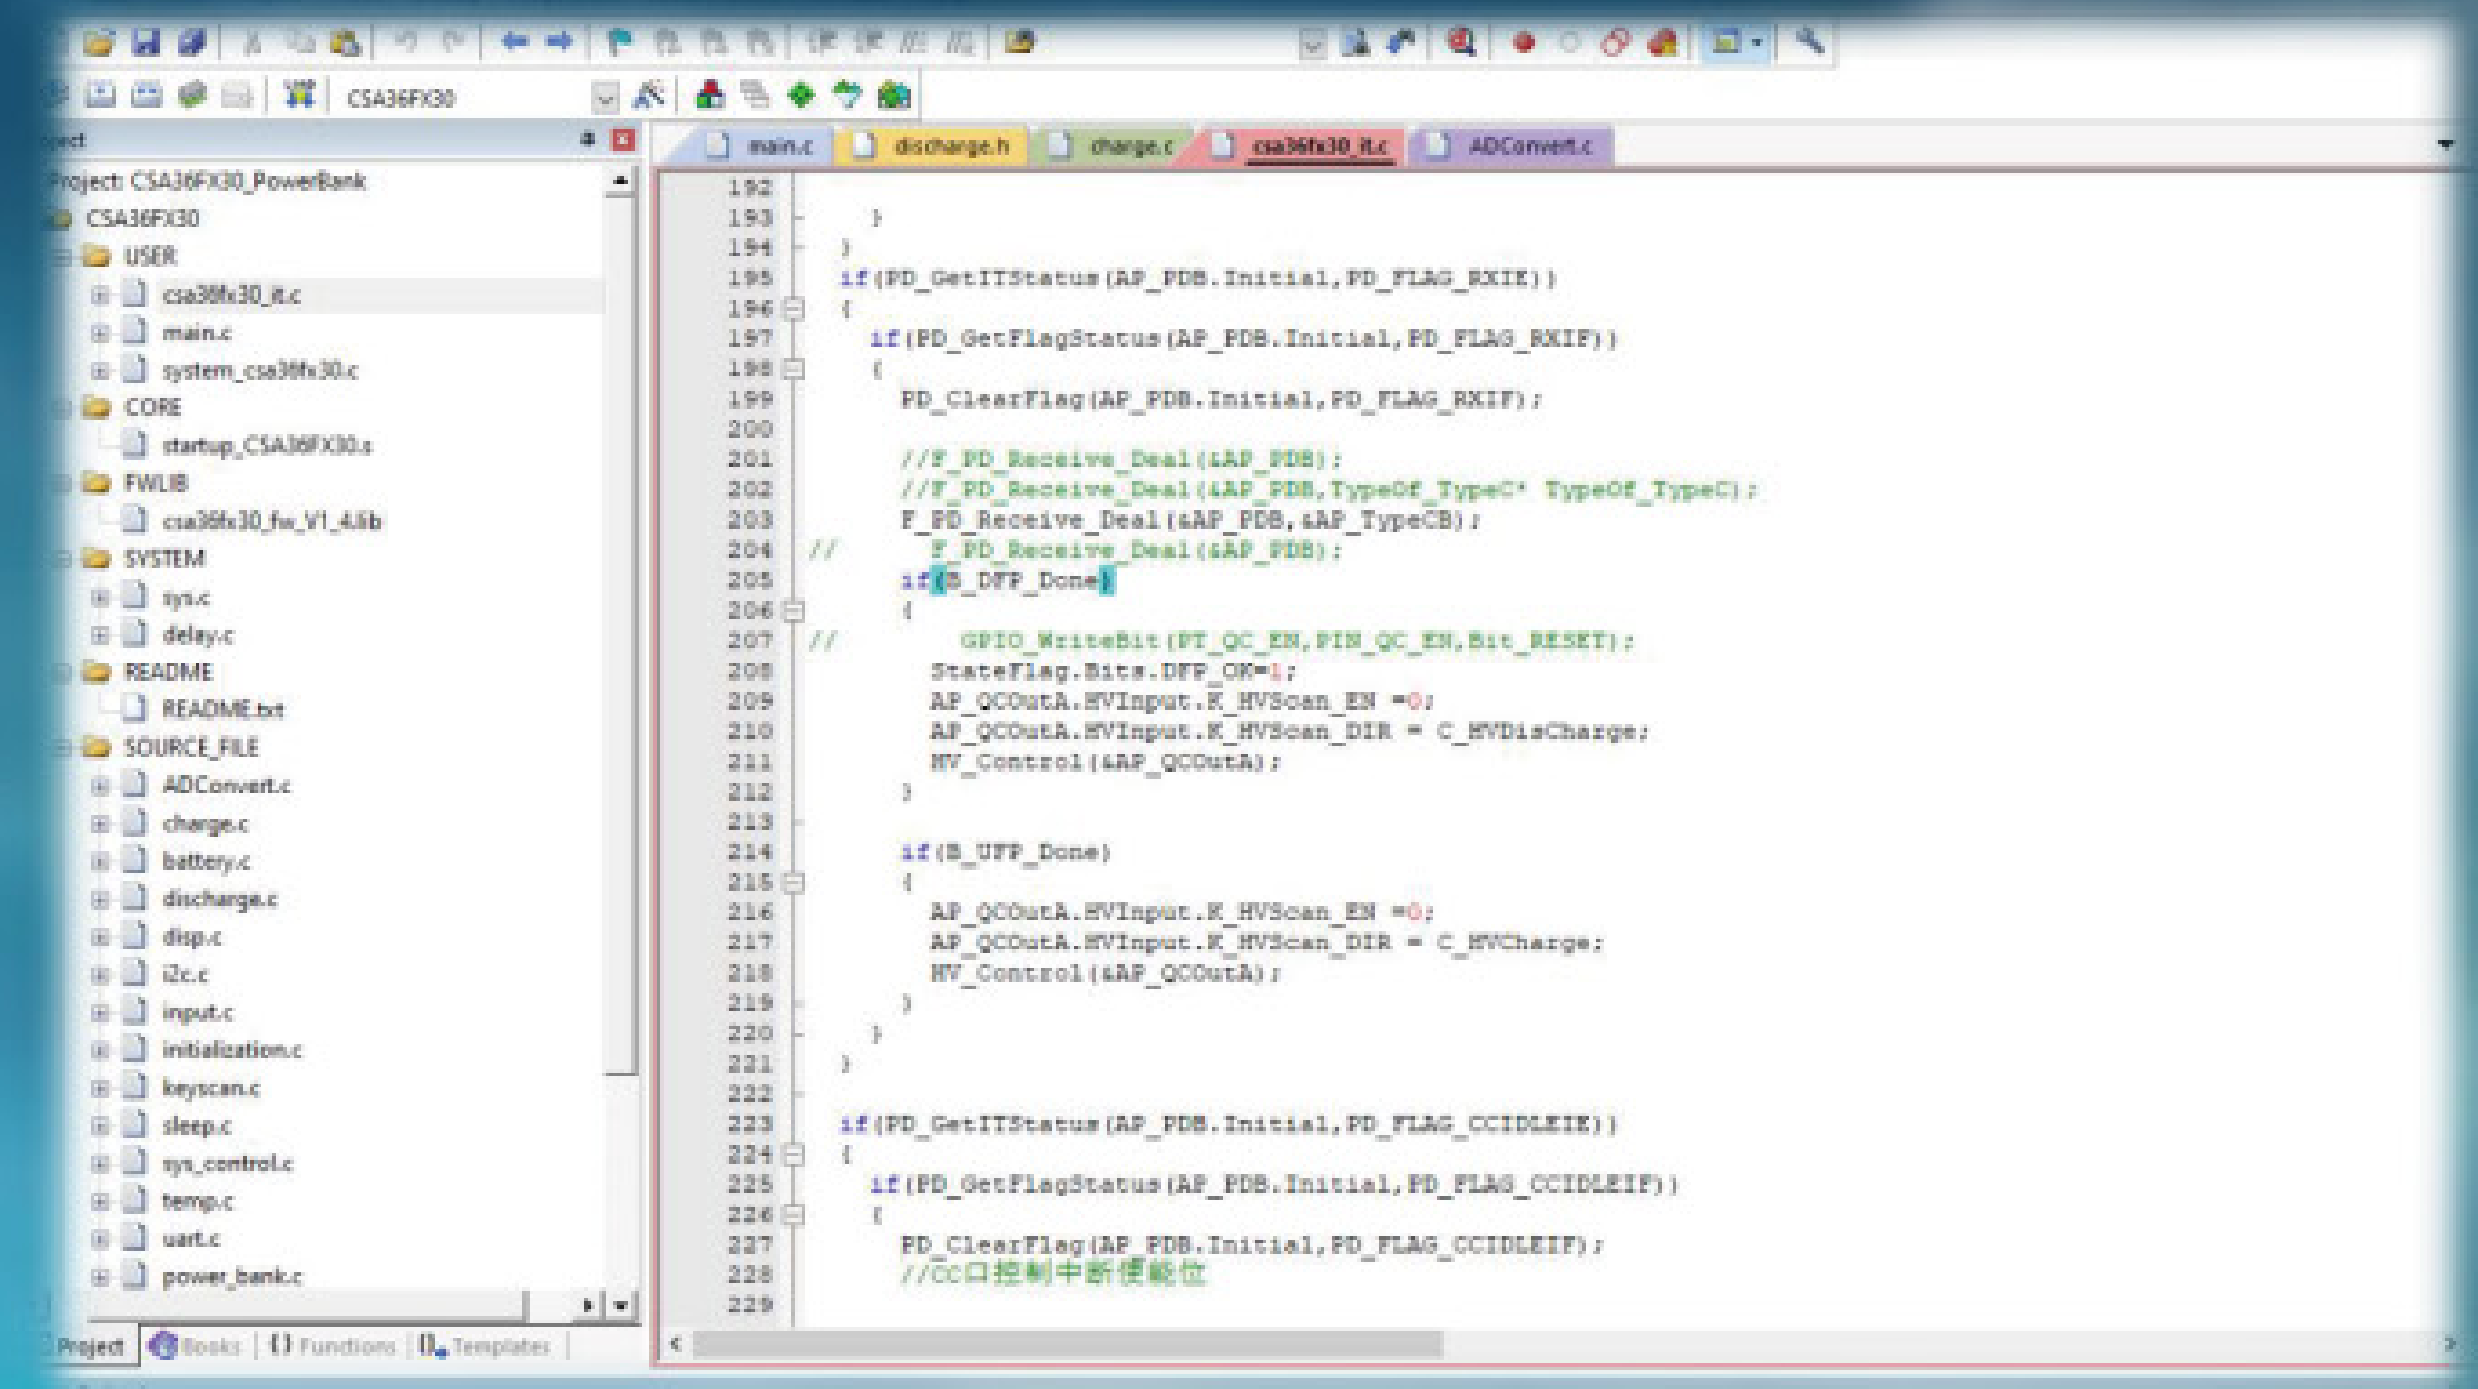

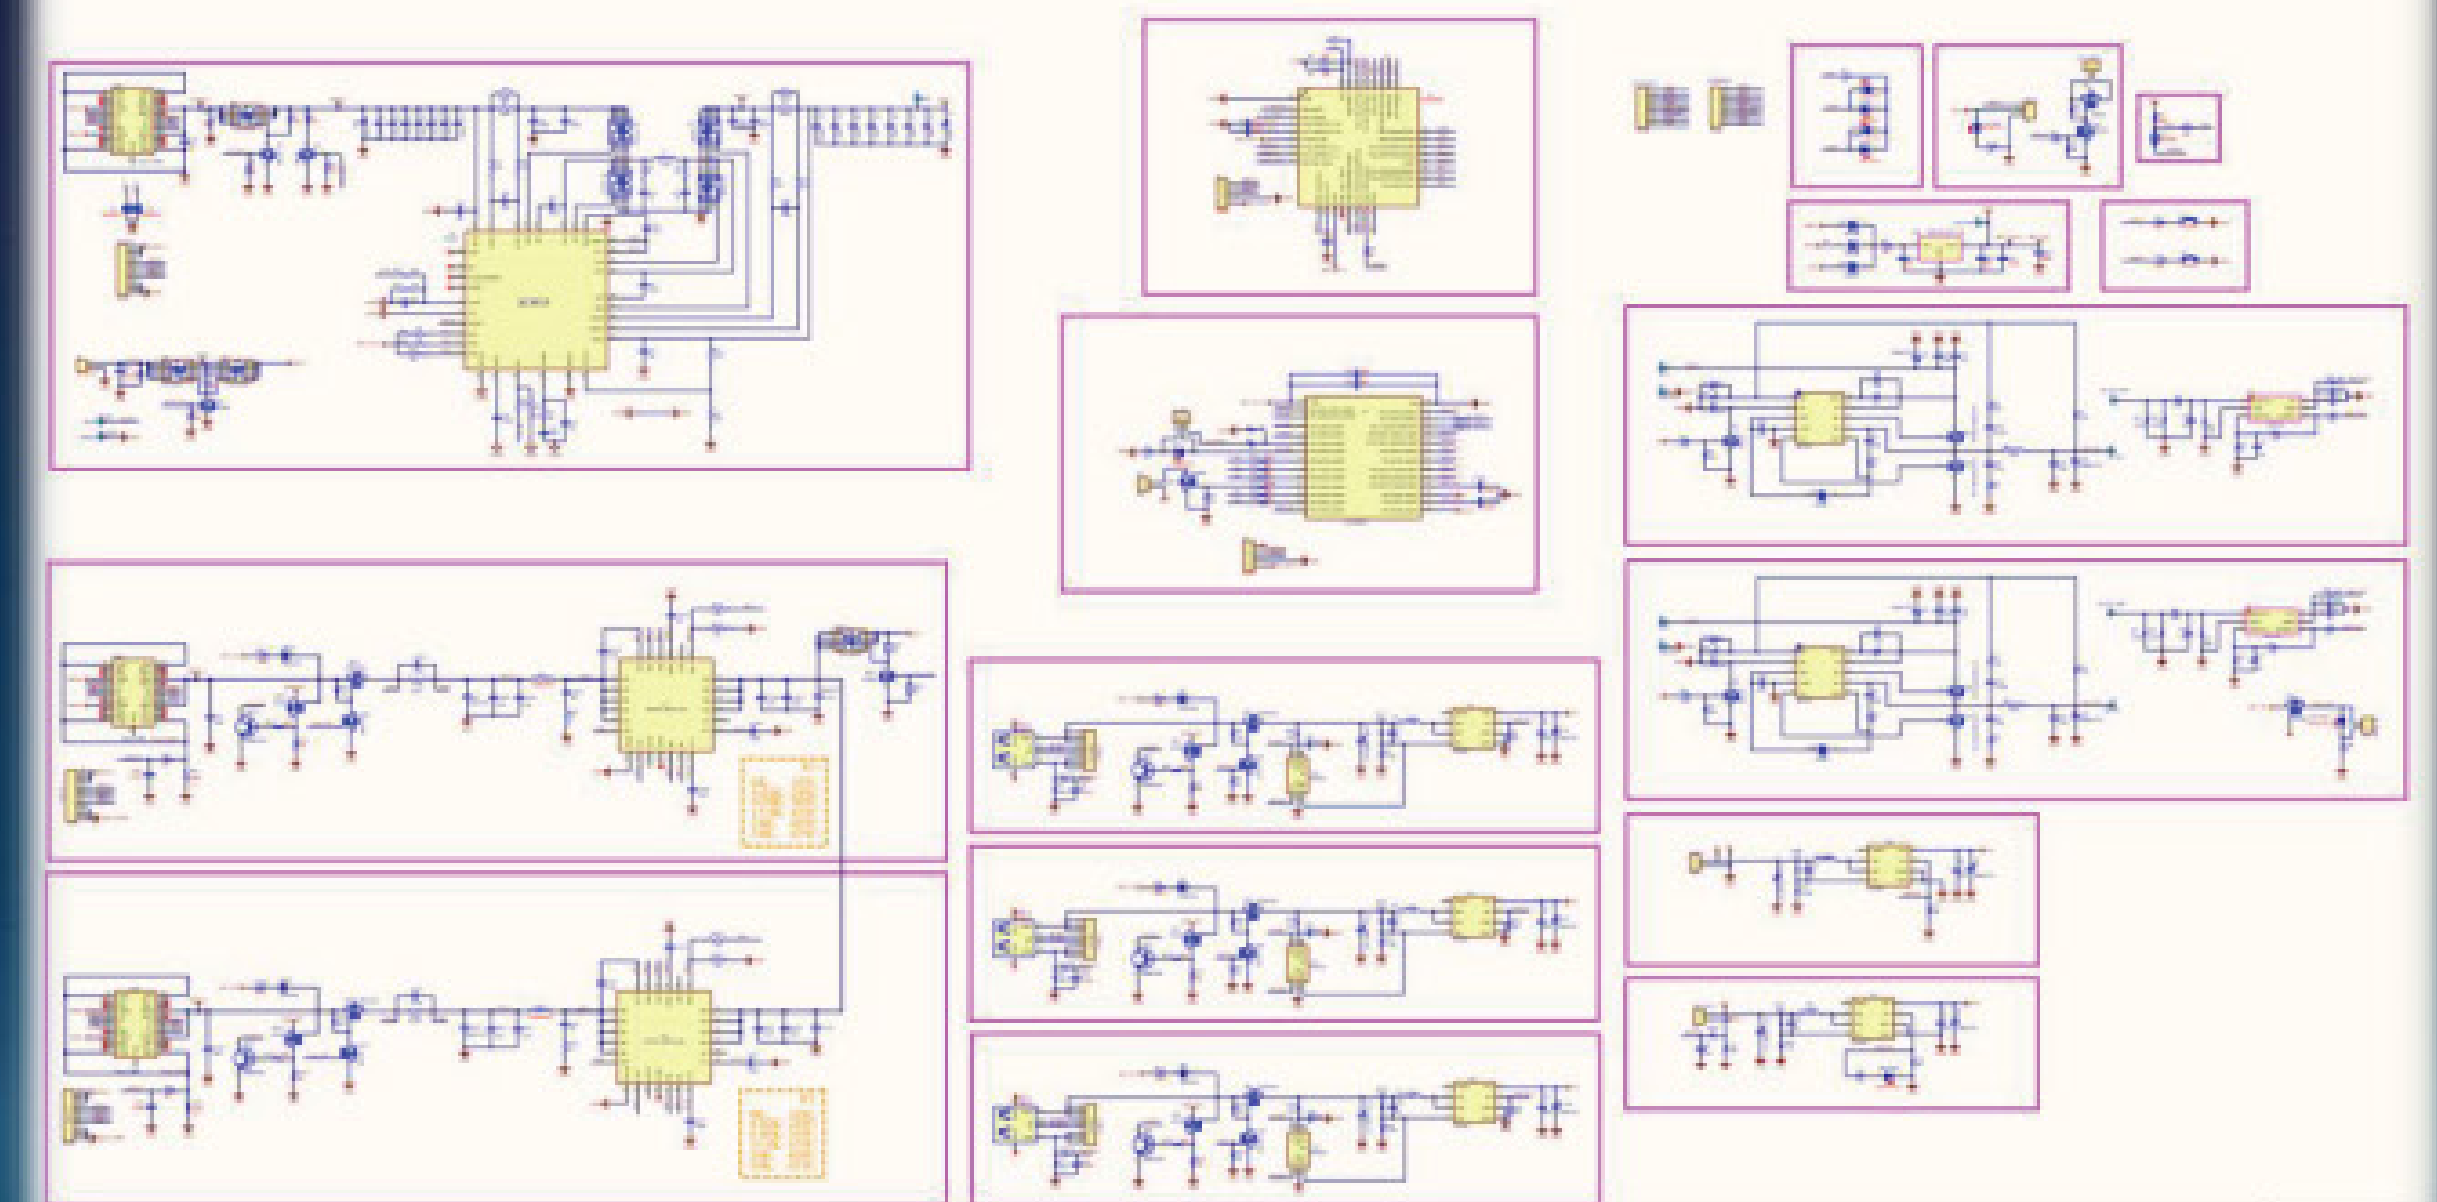

The structural design is expected to take 6 working

## 5. Hardware/Software Scheme Design

Software and hardware engineers design corresponding modular functions according to customer needs.

### 6. 3D Proofing

After the design is completed, 3D proofing will be delivered to the customer for confirmation.  
This project is expected to take 4 working days.

### 7.Product Mouldings Open

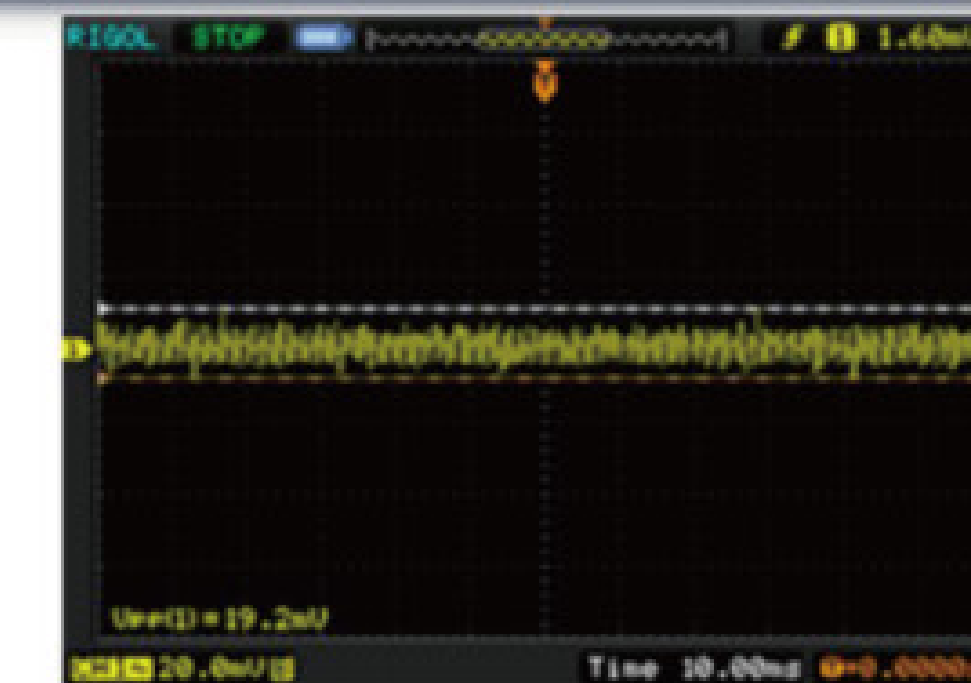

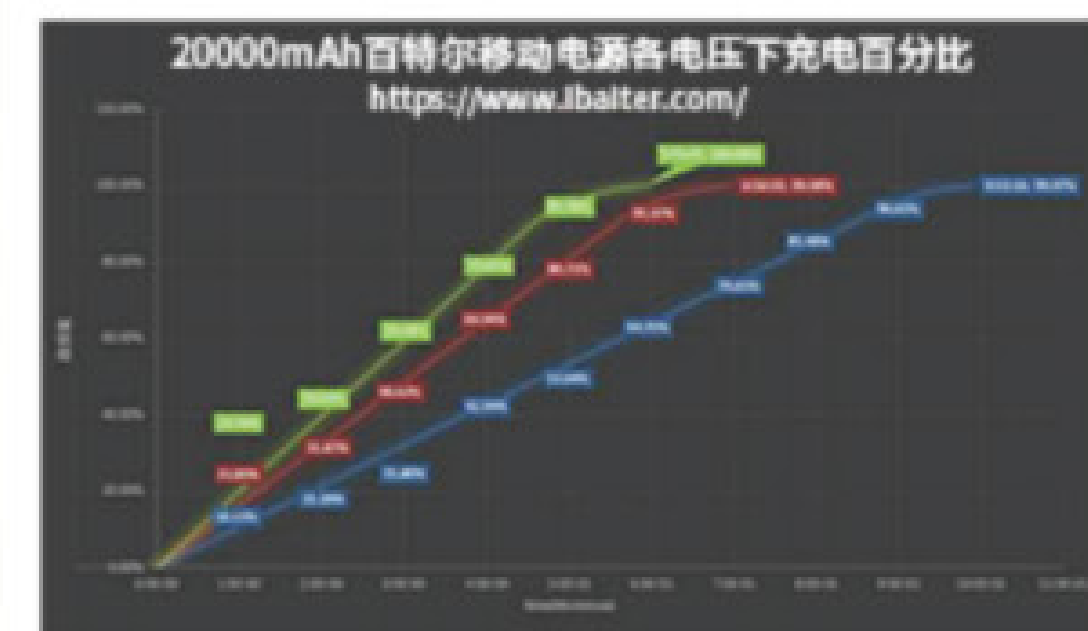

The product opens the mold.  
This project is expected to take 30-45 days

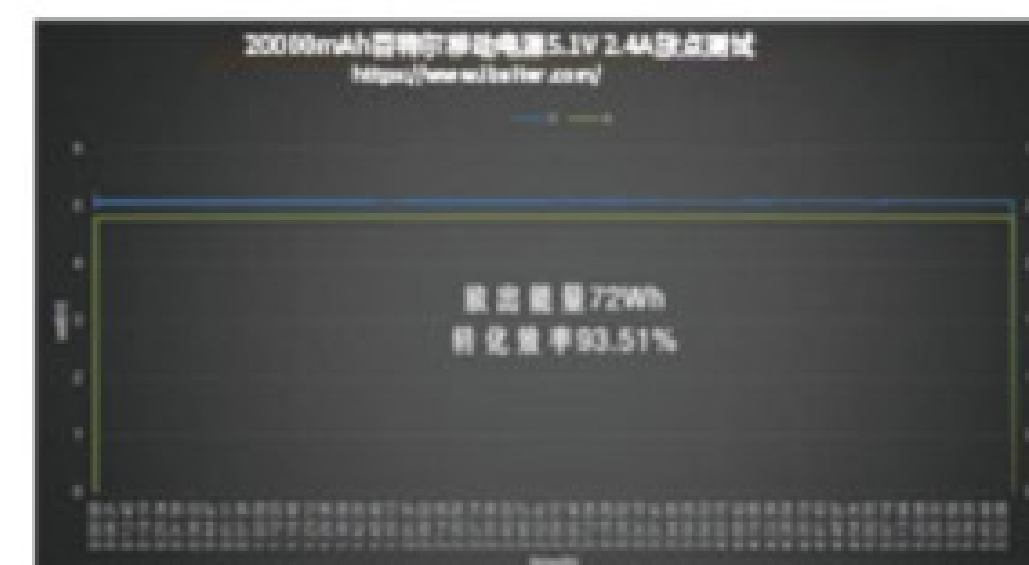

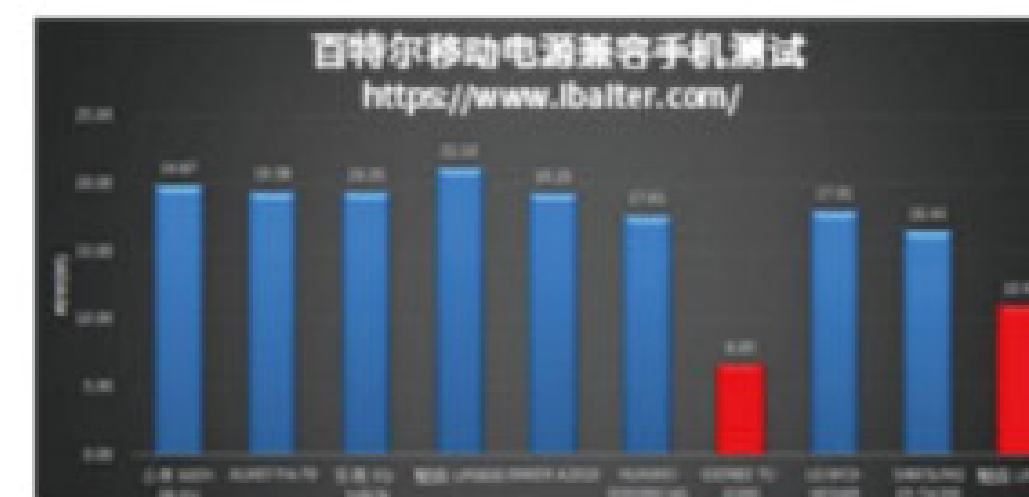

## 8. Product performance test

All-round testing is required after the sample is produced, such as: Protection performance test, Input voltage range test, Output voltage test, Load regulation test, Quiescent current test, Dynamic load test, Overcurrent test, Short circuit test, Capacitive load test, Charge and discharge efficiency test, Output ripple test, Charging turn light test, Discharge lamp test, Charging characteristics test, Discharge characteristic test, Switch button test, Discharge capacity conversion efficiency test, Charge and discharge time test
